HOW WE WORK

Custom formulation, manufactured under licence.

Contract manufacturing engagements typically follow four stages from initial brief to commercial supply. Specific timelines depend on formulation complexity, regulatory requirements and stability-study scope.

01 - Brief & Feasibility

We review your target composition against our licensed scope and raw-material sourcing. Output: feasibility note, indicative pricing, recommended specifications.

02 - Pilot Development

Pilot batch on the ARBES SGX-806P line under representative conditions. Sample dispatch for sensory, visual, and dissolution evaluation.

03 - Validation & Stability

ICH Q1A(R2)-aligned accelerated stability protocol initiated. Regulatory dossier compilation in parallel: composition statement, manufacturing process flow, COA samples, GMP, FSSAI, Halal certificates as applicable.

04 - Commercial Supply

Full commercial production, in-house QC release, finished-goods packaging and dispatch. Ongoing batch supply scaled to your demand profile.
